IT 400 - The Access Terminal

The terminals of the IT400 series are designed for door opening and door monitoring, elevator control, employee and visitors records. They are effective in protecting high value goods and sensitive information areas, and will fit into any security concept. The access readers are available for all standard light switch format programs like Jung, Gira, Märten, SSS Siedle, with integrated or external door control. IT 420 / 430 are available for door opening as stand alone terminals.

IT 400 Fingerprint

High security level is provided with the biometric verification module terminal IT400FP. To generate a booking, the employee enters a PIN code on the terminal keyboard. The verification process references the fingerprint record stored in the terminal memory. If the scanned fingerprint matches the record stored, the booking is accepted.

IT 800 Time Management and More...

The terminals of the series IT800 for Time Management, Shop Floor Data Collection, Access Control and Information accurately and quickly record IN/OUT bookings, absences or cost centres. Besides, they inform the user about all time accounts, about the last bookings, remaining holidays and display individually defined messages. Evaluations (e.g. the personal booking journal) are called off directly at the terminal and can be returned by the system via e-mail or generated as a report. Used as an access control central unit, up to 4 subreaders of the Series IT400 can be connected.

IT 860 Shop Floor Data Collection

The terminals for Shop Floor Data Collection are easy-to-use and they offer the complete range of application for personnel time recording, PDC bookings for job references, current status of job data, multiple machine operation and job transfer upon shift changeover. Input of the required production and job data is made easily and quickly via the industrial keypads and/or barcode scanners. The online plausibility check completes the security factor for production business processes.

IT 900 Communication

The terminals of the series IT 900 stand for communication in direct dialogue between personnel and system, employee and management, for information and function. Up-to-date and comprehensive employee information at any time, easy to be inquired wherever a terminal of the series IT900 or a platform independent ZEUS® client is installed.

Advanced PC technology, the brilliant resolution of the VGA touch screen and the flexibility of the modern Java user surface open new prospectives in the communication with your personnel.

The Complete Solutions

The IT series from ISGUS have been designed as a communicative component of the complete system solutions for all fields of application for optimised and efficient time management. The software of the ZEUS® system family and the terminals of the IT series complete each other to an integrated solution.

The employees get information about holiday planning and time accounts, can update forgotten or incorrect bookings or assign the personnel time to projects or jobs at the terminal display via touch screen, e-mail, ISDN telecommunication or via Intranet / Internet. The information as well as the functions are available in user defined languages.

The ISGUS customer is privileged to decide for the preferred terminal according to his individual needs. The readers are available in HITAG, MIFARE or LEGIC proximity technology, also for smart or money cards, for infrared high security badges or for magnetic stripe badges.

Put your ideas into practice. The key advantage of the IT terminal series is, that they enable you to perform a multitude of tasks: record and track your data easily and completely, authorise and update bookings, open and monitor doors, report over quantities and reject quantities, plan absences.
