

Kelio Data

Kelio processing at the heart
of your information system

Kelio Data is a powerful data warehouse that allows you to use your decision-making tools to develop reporting that is adapted to suit the different players within your organisation.

Our technology helps you make decisions

The key features of the warehouse:

- ⊕ **ACCESSIBILITY** with storage by functional theme
- ⊕ **FLEXIBILITY AND ACCURACY** for data synchronisation
- ⊕ **COMPATIBILITY** with Firebird®, SQL server®, Oracle®
- ⊕ **INDEPENDENCE** from Bodet to create your own management indicators or data consolidations

Decision-making analysis tools

Such as Business object®, Crystal Report®, Cognos®, Hyperion®, SAS®, Harry software® and many more.

With Kelio DATA you can create your own data warehouse which will enable you to extract and record the historical data you may require. You can connect using Excel® or any other query, reporting or analysis tool to make your own summary reports.

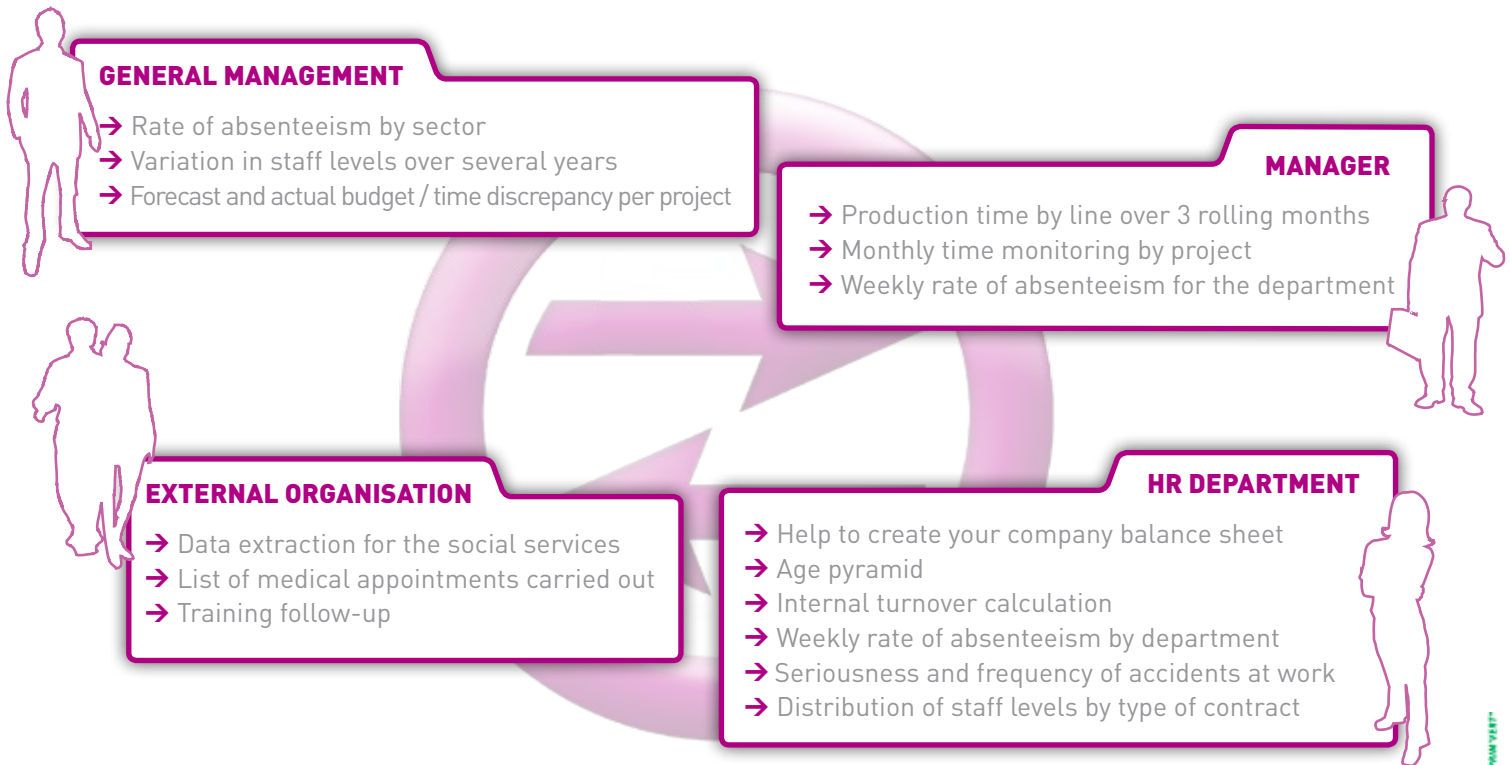

What is a data warehouse?

- A **logged** database to monitor data progress over time
- A **functional** and **"task"** database to facilitate the use of HR data

What data can be synchronised in the warehouse?

- All employee-related HR information (personal, professional and administrative data)
- Time and attendance totals, absence balance/counters, etc.

Examples of reporting that can be produced thanks to Kelio Data

What are the web services for?

→ The web services are supported by **technological data exchange standards** that are widely used in the IT world.

→ With the web services, Kelio DATA provides you with **the best real time standard interfacing** with your third party or decision-making applications.

The key features of the web services:

- ⊕ **PERFORMANCE & SECURITY** guaranteeing integrity for your data
- ⊕ **SIMPLICITY** of technologies and standards recognised and accepted by all players on the IT market
- ⊕ **OPENNESS** with HTTP access to Web services
- ⊕ **INDEPENDENCE** from Bodet to create your own data exchanges in your information system
