

Kelio Protect

Safety of your premises
simple and secure

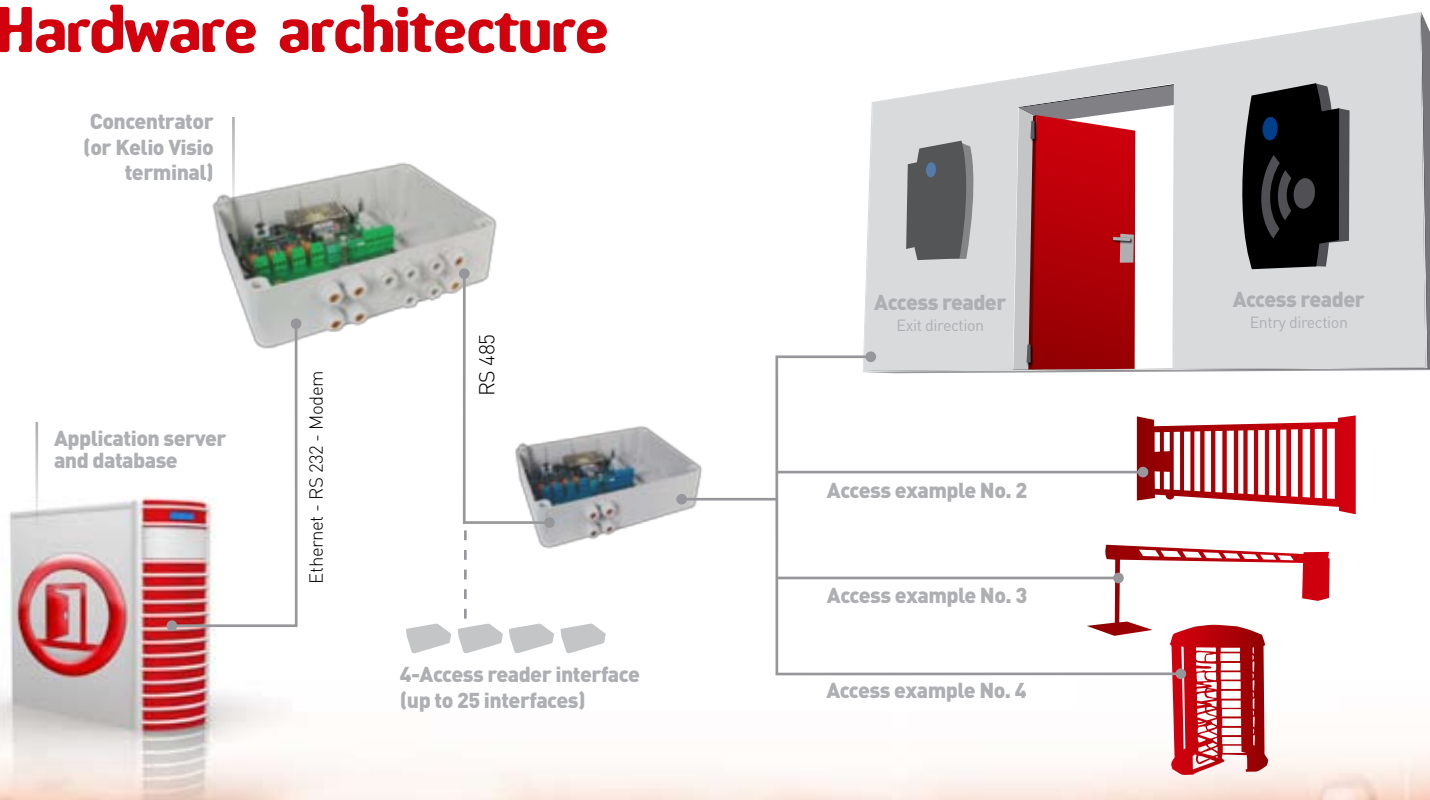

Centralised management of access control

- Access control with programmable safety levels
- People management via authorisation profiles
- Historical data of events sorted by filters
- Management of door contacts
- Management of anti pass-back
- Management of unauthorised access attempts (persons or badge numbers)
- Present's printout for Fire Alarm evacuation (FES)
- Controlled opening of an access door via software

Bodet + points

- + Full integration with time management (Kelio Integral/Optima):
 - Work schedule = Access authorisation schedules
 - Absences = Access lockouts
- + The badge may be used as a key to modify the security level of an access in real time.

Hardware architecture

Kelio Protect

Safety of your premises
simple and secure

Technology

Based on 100% Java technology, the application is accessed using your Web browser.

Simplicity

Intuitive and ergonomic, Kelio Protect enables basic or precise programming.

Autonomous operation

All rules and authorisations are stored in the concentrator in order to allow the server to operate autonomously.

Integrated Technologies

Multiple uses of card/badge/scan readers on the same system installation. Integration with the Kelio Prima, Integra & Optima time management software.

Performance

Management of up to 2,000 employees with the possibility to customise all the rights and authorisations.

Tracking

All events of the system are tracked in order to enable a customised follow-up of accesses.
