

**An overall access  
security solution  
for your premises**

# KelioSecurity

## A wide range of equipment

- Proximity
- Mifare
- Long distance proximity (hands free)
- Biometric
- Magnetic

What's more, thanks to our partners we are also able to offer you all equipment related to your access control system: door openers, suction pads, gates, lifting gates, turnstiles, etc.

## High performance technical support

Our team of 70 technicians, based in France, will provide you with a fast, high quality telephone service to answer any configuration questions you may have. They can also come out to your premises and work on site.

The BODET maintenance contract covers all hardware breakdowns and replaces your faulty equipment with new hardware.

# KelioSecurity

## Centralised access control management

### Principes

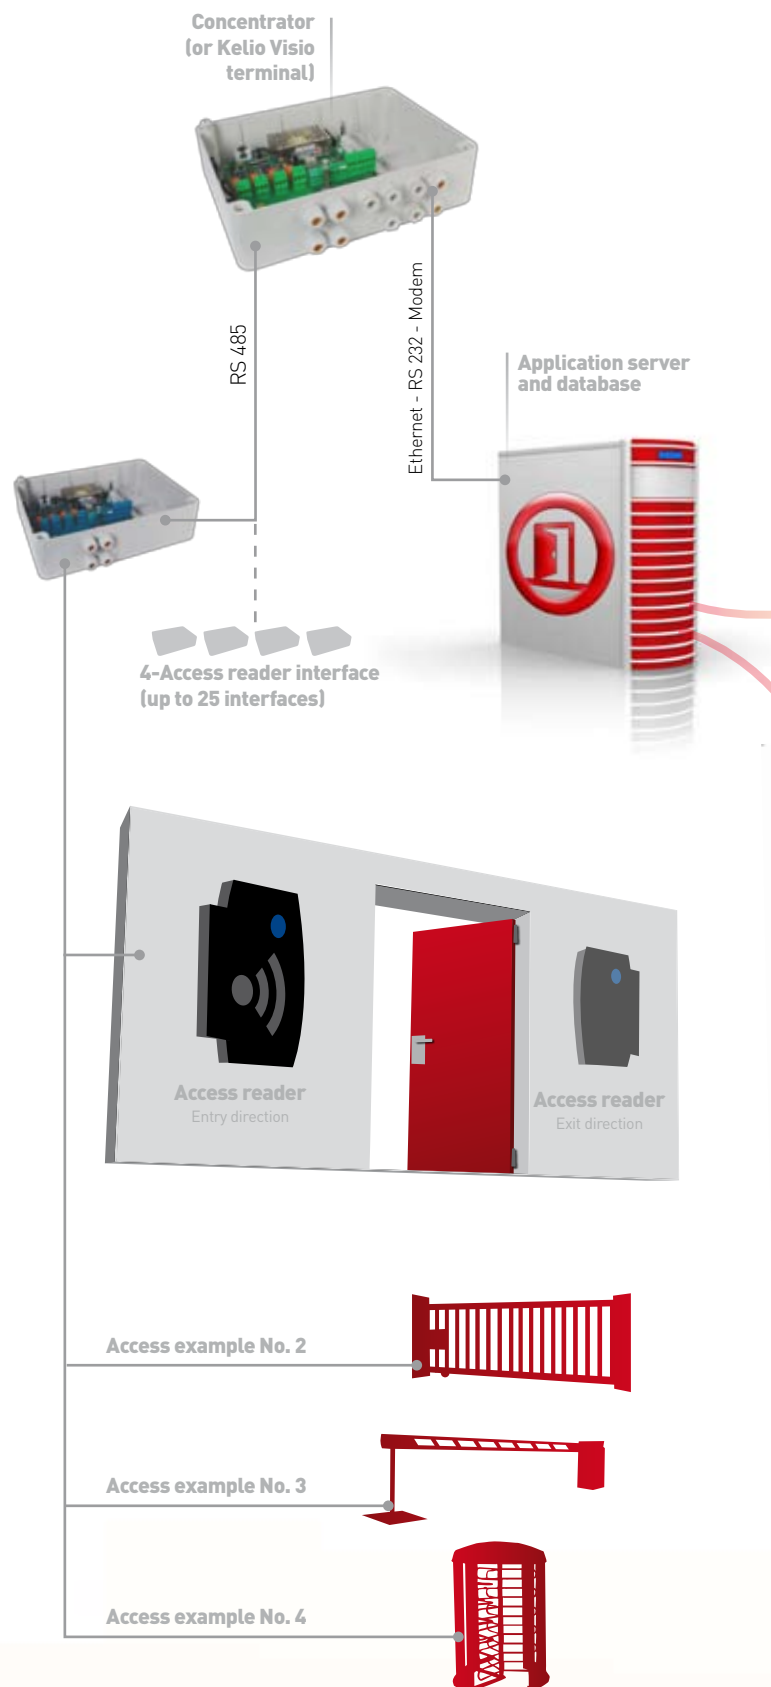

- Access control by desired safety level
- Individual management by authorisation profile
- Event log by filters

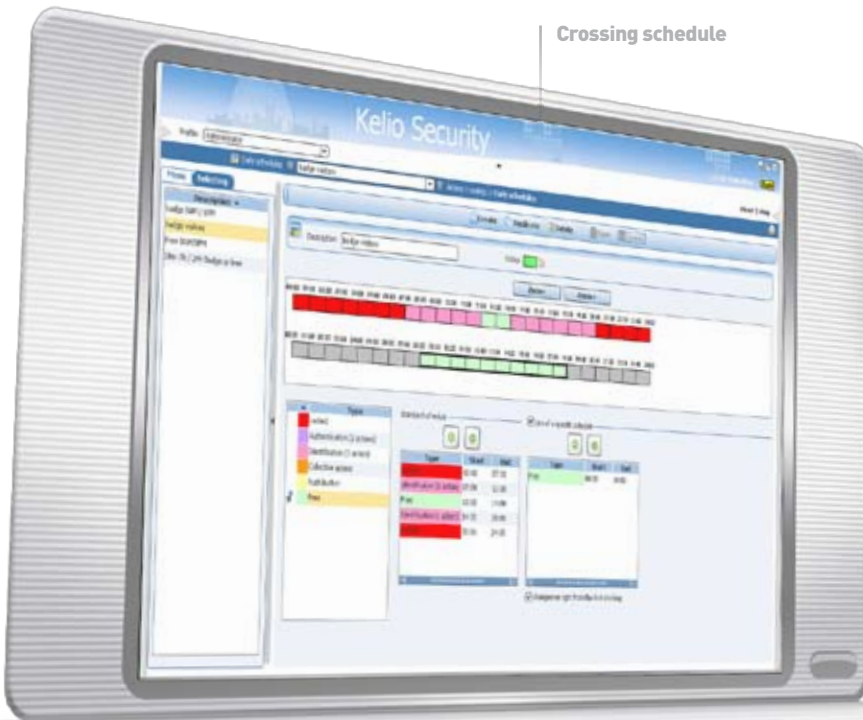

### Main functions

- Graphic access zone supervision
- Real time counters for the number of people per zone
- Combined with intruder alarm system
- Door contact management
- Anti pass-back management
- Opposition list management (persons or badge numbers)
- Printout of the list of those present in case of fire alarm (FES)
- Opening of an access from the software
- Pop-up window warning system, with acknowledgement obligation

### Bodet's additional key features:

- ⊕ Possible combination with Kelio time management.
  - Work schedules = Access authorisation schedules
  - Absences = Access lockouts
- ⊕ The **badge** may be used as a "key" to modify the security level of an access in real time

Crossing schedule

Individual record

## Simplicity

Intuitive and ergonomic, Kelio Security enables very fine and simple setup.

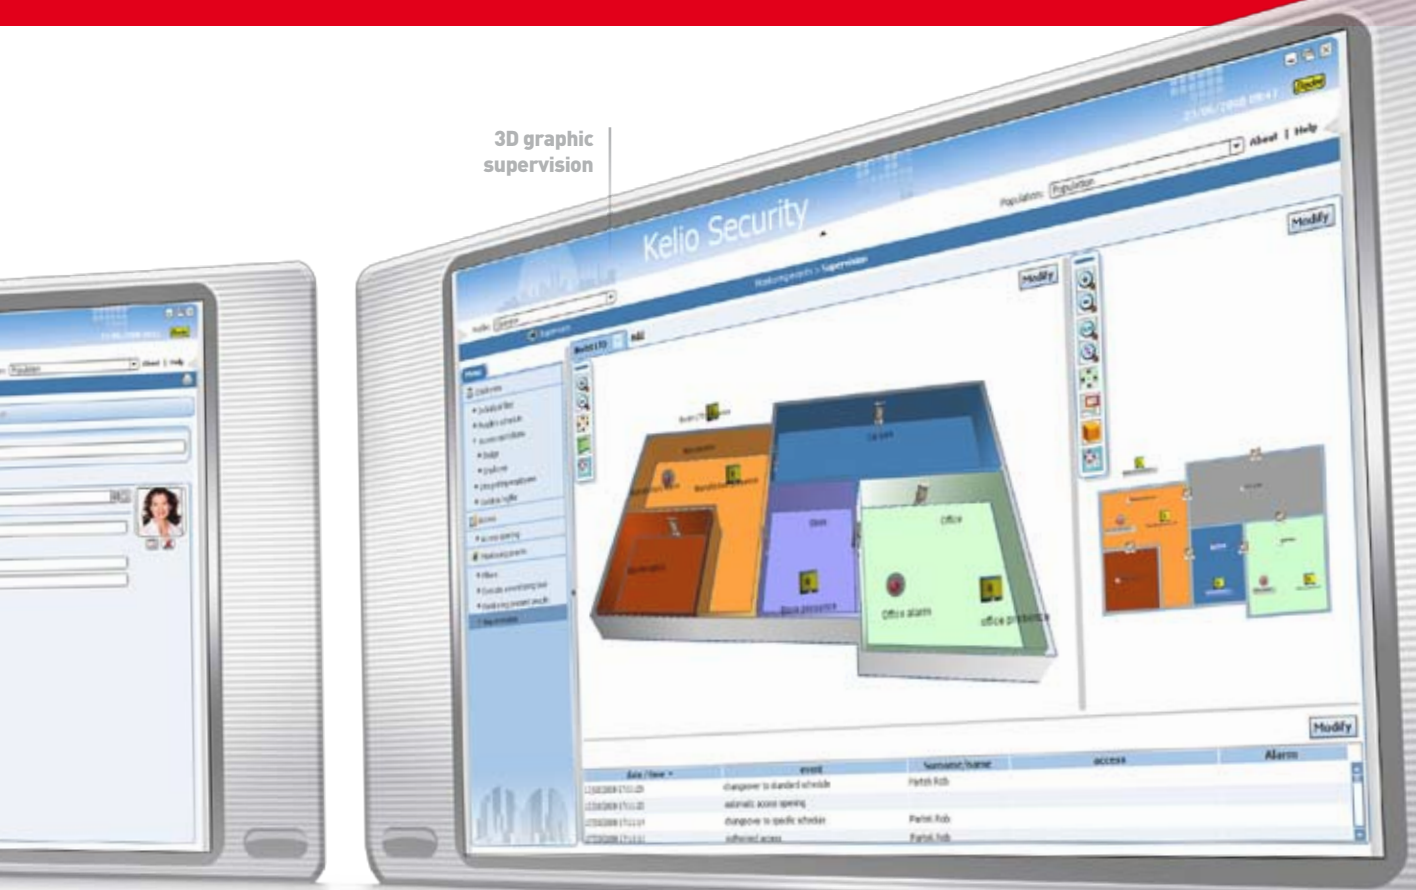

## Performance

Management of up to 5000 employees with the possibility to customise all the rights and authorisations..

2D graphic supervision

3D graphic supervision

## Traceability

All system events are traced in order to enable a customised follow-up of accesses.

## Technology

Based on 100% Java technologies, the application is accessed using your Web browser.

## Autonomous operation

All rules and authorisations are stored in the hub in order to allow the server to operate autonomously.

## Interoperability

Multi-technologies of badges and readers on the same facility. Native integration with the Kelio Prima, Integral and Optima time management systems.

a **BODET** solution

means guaranteed skills and high performance customer service
