- ▶ Access Control for SAP PP

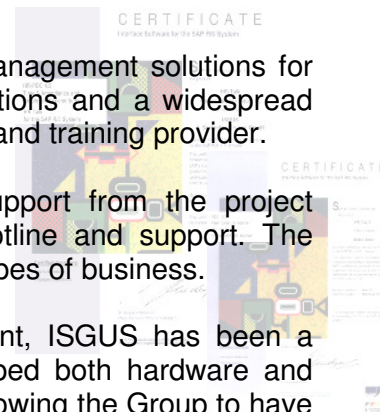

Competence, Experience and Quality

ISGUS is one of the leading European suppliers of time management solutions for personnel. The ISGUS group has now over 14,000 installations and a widespread sales net-work, enabling it to be an experienced consultancy and training provider.

The customer-oriented service ensures comprehensive support from the project planning stage through to installation, with subsequent hotline and support. The ISGUS products are available for all company sizes and all types of business.

As well as many years of experience in Time Management, ISGUS has been a certified SAP partner since 1994. ISGUS has also developed both hardware and software to complement their extensive range of products, allowing the Group to have a sound and detailed knowledge of SAP systems.

The Expert Time Management for SAP HR

ZEUS[®]HR is the ideal time management solution for companies using SAP systems, enabling them to maintain personnel records, time accounts and cost centres in SAP in real time.

ZEUS[®]HR transfers reliable data to the corresponding HR-PDC interface.

As a link to Time Management, ISGUS provides a recording level for all time relevant HR data and at the same time uses the information provided by the SAP environment.

Employees have the facility to interrogate the data on the IT700 and IT800 terminals providing them with details about their time accounts, bookings, balances, etc. The personnel events recorded in ZEUS[®]HR are directly trans-ferable to the SAP R/3 system, where the data is processed and current information is available.

All absences and related information, i.e. In/Out, breaks, official absences, are recorded and automatically transferred to SAP/R3.

The system also performs the task of assigning bookings to cost centres, projects and orders and transferring time event types like interim bookings for access control.

Access Control

Many security requirements are demanding combinable access control systems.

ZEUS®HR is capable of enhancing your SAP R/3 system. It also allows for the access control to be managed directly by ZEUS®, providing additional features such as time zone monitoring, 2-badges-principle and room surveys.

All information held between ZEUS® and SAP R/3 is automatically processed via the IT 400 series terminals.

This enables the opening and monitoring of doors; the control of elevators and turnstiles; and protection of employees and associated information.

Access readers are available with all standard reading technologies, both with and without PIN entry or as a biometric solution for fingerprint verification.

Order Data- and Shop Floor Data Collection for SAP PP

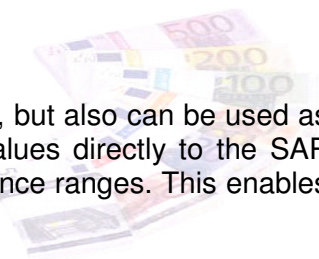

In connection with the SAP PP module for production planning, ZEUS® offers efficient and reliable production data recording, thus optimising your production flow and overall productivity.

The software receives the relevant production, order and basic records via the ERP interface. All time and paycard related events are first checked for their validity.

The evaluated data is reported back to the SAP system. ZEUS® provides easy recording of orders, operations, processes, order changes, quantity bookings, start/stop bookings, collective orders and the completion of all steps on the ISGUS terminals IT840 / IT860 and IT920, bookings on clients or mobile recording devices in all production areas, both in engineering and development.

Payroll

The ZEUS® application provides not only a recording facility, but also can be used as a calculating system, allowing the transfer of calculated values directly to the SAP info type pay slips. This also applies for absences and absence ranges. This enables the relevant data to be used for payroll accounting.

Terminals and Bookings

All Time Management relevant bookings are possible on the terminals of the IT series: In/Out, absences, breaks or access bookings. For shop floor data collection and job costing the following can be booked: cost centres, quantities and project times.

The IT series terminals also offer any information, from Time Management or Plant Data Collection relating to your employees, to be simply enquired upon. The option is provided to allow bookings via badge, transponder or key tag (with or without additional PIN). All standard reader technologies are available for the identification: proximity, Legic, Hitag 1, Mifare, SimonsVoss, infrared, magnetic stripe or smartcard reader. In addition, biometric recognition, for example fingerprint, iris and face recognition are possible.
