

**Tighten Your Security with Cogard**  
 Electronic Checkpoint System  
 for Security Personnel

- With integrated printer or PC link
- Magnetic contacts for reliable operation in any weather
- Maintenance-free
- Tamper-proof
- Easy to use

## Simple and Effective: Cogard Tour System

Cogard wall stations are installed at strategic checkpoints along the routes your security personnel patrols.

Security personnel simply touches the handheld data collection unit to the wall station to register the date, the time of day and the wall station's ID number. To confirm correct transfer, a beeper sounds and a light flashes.

At the end of a shift, the guard inserts the handheld unit into the station box for data processing and recharging.

The Cogard STANDARD version prints out a complete, clearly organized list of all checkpoint entries.

The Cogard PC version lets you upload the data to a PC.

But no matter which Cogard system you choose: Cogard ensures seamless monitoring of your security personnel's routes.

### Wall Stations

- Magnetic coding to prevent tampering
- No maintenance required
- Can mount on any surface

### Handheld Data Collection Unit

- Lightweight (275 g) and easy to use
- Shock and water-resistant
- Operating time on one charge: 3-4 days
- Memory capacity: 800 checkpoint entries

### Comcharger

- For recharging additional handheld units
- Integrated line voltage transformer or plug for car cigarette lighter

### Pin Modules

- For use when several persons share a handheld unit
- Identification of different security guards

### Cogard STANDARD Station Box

- Recharger and data analyser in one
- Integrated printer
- Prints out any number of copies
- With integrated line voltage transformer or plug for car cigarette lighter
- Use of numbered original BENZING paper for printouts to avoid tampering of reports.
