

# Automatic Bell Ringer

## Single and Dual Channel Model

The single channel model is a 7 day time switch with pulsed output for applications where a signal is required to ring a bell or sounder unit for notification of breaks or shift changes.

Each unit has the ability to program the duration of the signal, time of activation and day of week.

The dual channel model will allow a further channel output for a totally independent signal where separate times can be defined. It is ideal for a school with lower and upper schools that start and end at different times on the same site location.

### Features

- 200 event memory.
- Multi pulse or single pulse output between 1 and 15 seconds.
- Key protection: secures the unit so programs can only be entered or cancelled by the key holder.
- Easy to use keypad for programming the unit.
- Battery back up.

### Specifications

- Dimensions: H112 mm x W226 mm x D50 mm
- Power: 220/240v
- Switch action: S.P.S.T
- Operating Temperature: -0 °C to 45 °C
